

Applied Analytics[®] is the industry's first data analytics solution built for independent brokers.

Applied Analytics is the only integrated data analytics solution that presents your management system data in an easy-to-understand visual interface.

Fully integrated with Applied Epic and Applied TAM, the application accesses, aggregates and analyzes your data to deliver multiple levels of analysis on key performance indicators across your brokerage's book of business, employee operations and insurer relationships.

Applied Analytics provides the business insights you need to make better business decisions and maximize profitable relationships with your customers and insurer partners.

“ Applied Analytics allows us to view everything in terms of profitability, and lets us analyze our data in a way similar to larger captive agencies. Every key performance indicator is tied to monetary goals of our agency, so when we make changes, we can see the impact on our employees, clients and our bottom line. ”

Ryan Moniz, Director of IT, Anderson Insurance Associates

Enables your brokerage to

- Manage the impact of new, renewed and cancelled business.
- Expand current and prospective customer relationships through visual analysis of your book of business and geographic distribution.
- Optimize internal operations by comparing real-time data to historical employee performance trends, success rates and progress toward goals.
- Focus on insurer partners most likely to provide a timely response and competitive policy for your customers.

Core Capabilities

Business retention and growth reporting

Applied Analytics analyzes client portfolio development, including new, renewed and cancelled business, over designated periods of time through the Executive Summary dashboard.

The Client Retention Summary dashboard includes metrics to review your brokerage's retention across client, policy, premium and revenue metrics

Brokerage employee performance tracking

A consolidated view of internal operations provides insights about business metrics such as employee acquisitions, attrition, renewals and book of business over time; how quickly staff are completing tasks and activities; workflow bottlenecks; responsibility overlaps and which employees are hitting sales goals.

Insurer performance insights

Applied Analytics allows you to quickly assess insurer performance in terms of policy volume and revenue, new business and submission activities.

These insights enable you to quote and book policies with your most responsive insurers, ensuring you provide the best coverage to your clients while maximizing profitability.

Data analytics make companies five times more likely to make decisions faster than their peers and likely to be in the top 25% of financial performance within their industries.
