Applied

# Quote commercial lines business without leaving Applied Epic

Natively brings single-entry, multi-insurer comparative rating into Applied Epic®, with one data source across quoting and application.

**"Being able to accept the quote and create a policy shell in the same platform is a major benefit that has created a lot of efficiency for our team."**

Kristin Baker
Chief Operating Officer / VP of Commercial Lines,
Rollo Insurance Group

**30+** commercial markets accessible

**60%** agencies that spend 3+ hours a day manually entering quotes

**3x** faster multi-line quoting

## How it works

### Enter the risk once

Policy data flows through the quoting workflow and bridges to the insurer's panel.

### Find in-appetite markets

A risk shows which of 30+ markets have appetite to take it.

### Remarket from the record

An expiring policy routes through comparative rating to new markets, from its Applied Epic record.

## Why it belongs in Applied Epic®

### Nothing to bolt on

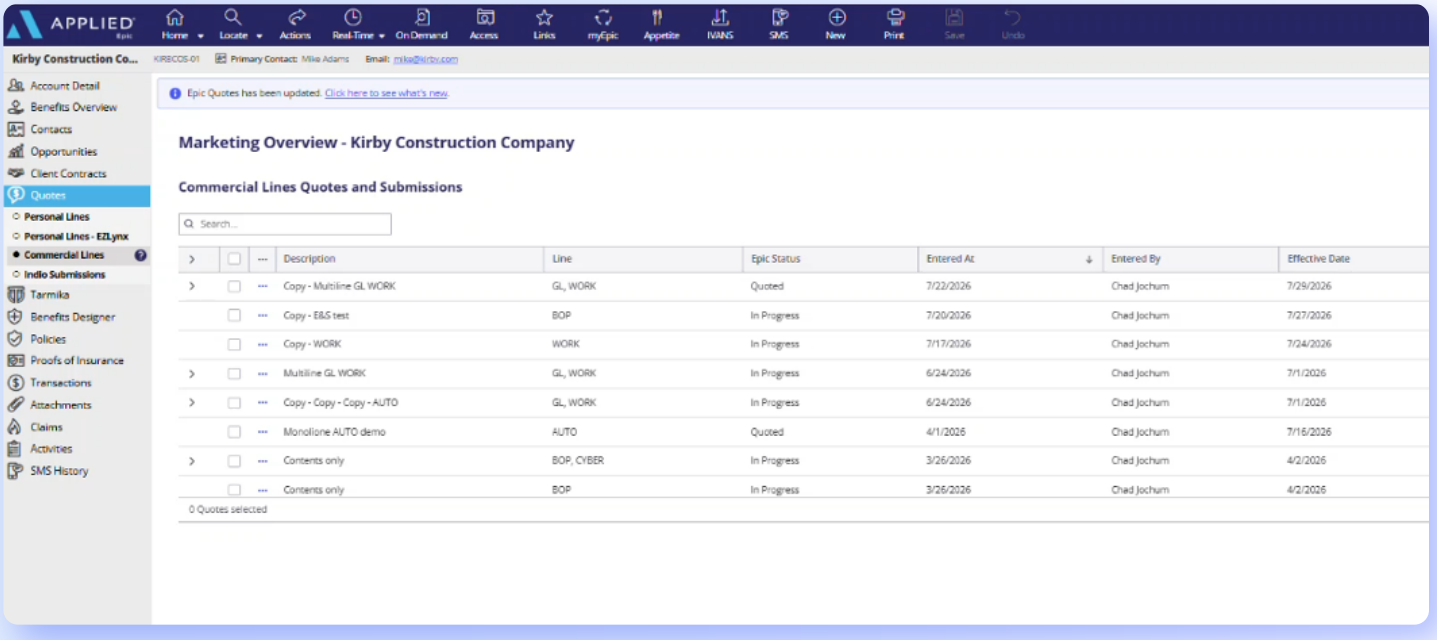

Comparative rating runs inside Applied Epic, not in a separate window or vendor app.

### No rekeying between systems

Policy data entered in Applied Epic drives rating, bridging, and builds the policy shell on bind.

### One system, quote to renewal

The accepted quote becomes a policy shell, carrying into service and renewal.
